# RENOLIT DUALFIX

## A universal adhesive for roofing

The RENOLIT DUALFIX universal adhesive for roofing is a one component moisture curing polyurethane glue especially created for the bonding of roofing membranes and flat roof insulation. The RENOLIT DUALFIX adhesive for roofing is applicable for both new builds and refurbishments.

- Quick and easy processing.
- The clearly distinguishing blue color ensures the glue is applied to the whole roof surface.
- Application possible from +5°C to +35°C
- The empty canisters can be completely recycled after use (no residue or chemical waste).

- Free of strong solvents.
- Heat not required, the glue is processed cold.
- A quick and easy connection and disconnection of the dispensing hose and dispensing accessories makes it easy to process insulation and roofing membranes alternately with one and the same adhesive.

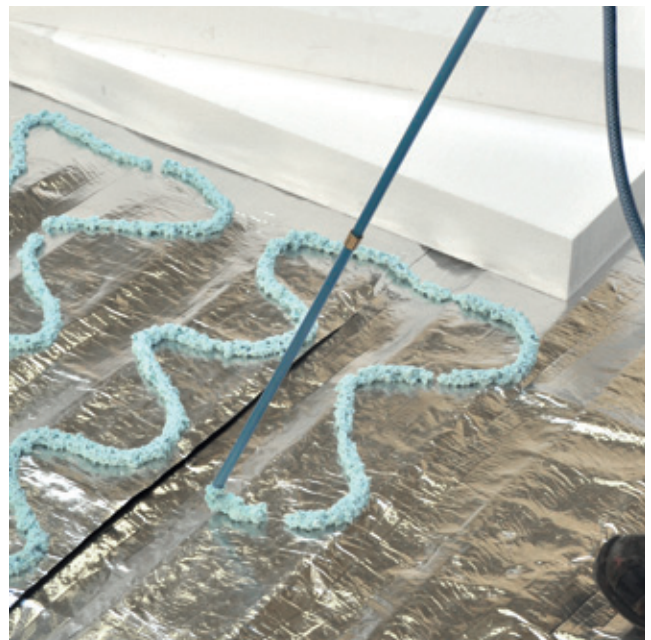

### BONDING OF ROOFING MEMBRANES

The RENOLIT DUALFIX adhesive is atomized onto the surface/insulation by means of a spray gun. The roofing membrane is being rolled and pressed onto the adhesive until sufficient initial bonding has taken place.

RENOLIT DUALFIX is compatible with most fleece backed roofing membranes (RENOLIT ALKORPLAN A, RENOLIT ALKORTEC A, ...).

### BONDING OF THE INSULATION

The RENOLIT DUALFIX adhesive is dispensed on the surface/insulation by means of a spray nozzle. The insulation panels are positioned and pressed onto the adhesive until sufficient initial bonding has taken place.

NOTE: Please consult the RENOLIT DUALFIX application instructions before use.
